

Maintenance Webinar

powered by NVDO and Hexagon

Why Energy Monitoring Should be a Part of Your Asset Management Strategy!

Thursday October 6th, 12.55-14.00 hours Dutch Time

With energy prices skyrocketing, the rising demand and an increasingly volatile availability of energy resources; energy management is more important than ever and requires a sustainable approach.

Have you ever realized that good energy management can not only save on energy costs, but also increase the asset performance and reliability?

Where the daily news mainly talks about energy management on a global scale, in this Maintenance Webinar we will discuss what you can do for efficient energy management and asset optimization in order to increase margins. Thanks to the collaboration with Hexagon, this Maintenance Webinar is free of charge and everyone is welcome!

During this special webinar we will cover:

- Why energy management and sustainability should form part of the maintenance strategy
- How energy costs can be managed and optimized
- How asset reliability can be increased through energy management and how asset failures can be predicted
- In short: how the right Asset Management Strategy can help you use energy more efficiently and achieve your sustainability goals

Join this webinar to learn how you can create a sustainable future and how customers of Hexagon have achieved it.

Speaker

Thijs Kleijngeld

Thijs is a Solution Consultant for HxGN EAM. In this role he advises (potential) HxGN EAM users on their digital transformation within asset management. He mainly works in the Benelux and the Nordics and has held various positions within Hexagon within Asset Management and supply chain. Thijs takes pleasure in inspiring others by sharing practical insights from the industry, giving examples of what can be done with the latest technology.

This special webinar is jointly organized: Your information will be shared
